

New Pillows 2009

In the new season will revolutionary our cushions and use a new foam material and new cushion covers.

Foam material QDF: (Quick Dry Foam)

This foam material was developed particularly for the outdoors. QDF has improved through large and open pores, so that the drainage of rain water (water run) is guaranteed.

See diagram below.

Furthermore is the foam material anti- micro-bacterial, so even by constant outdoor use, mildew can be prevented? In addition. QDF is able to maintain its original form.

See diagram below.

New Pillows 2009

Sunbrella fabrics are particularly developed around extreme climatic conditions to be long-lasting. The Sunbrella of materials are made exclusively of spin nozzle-colored Acryl fibers. With this production way the color pigments are enclosed by the fiber. This protects the colors effectively against harmful UV rays.

Sunbrella is strain able, easy to maintain and stands for maximum user comfort, for highest quality and a broad application scope, e.g. Lounge furniture, awnings, boat cushion, sun screens etc. See illustration, sun screen Sunset

Because of the breathing activity of the Sunbrella of materials, we can prevent condensation and prevent therefore the formation of mould forwards.

That the drainage (water flow) is not impaired, we place on the lower surface of the cushions a Mesh (net).

MAZUVO Sets on quality, you should set on **MAZUVO**
